Fixed insect screen

HAWAII

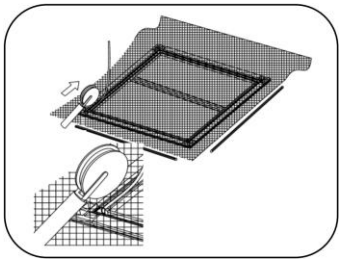

ASSEMBLY AND INSTALLATION INSTRUCTIONS

1

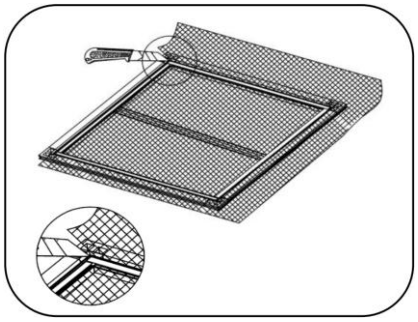

Fit the profiles together with the corner connectors as shown. Once assembled, fit the crossbar, if supplied. Insert the brush seal around the entire perimeter through the slots in the corner connectors.

2

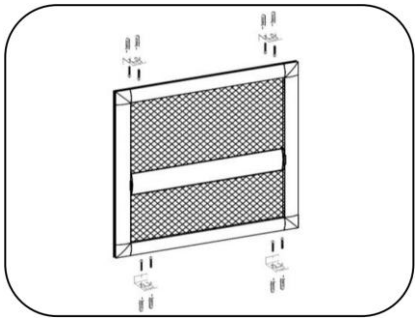

Lay the mesh over the screen, with its threads aligned with the profiles. Using your fingers or a spline tool, press the spline into two adjoining sides at 90°, keeping the mesh straight without tensioning it. Fit the remaining two sides, pulling the mesh to tension it.

3

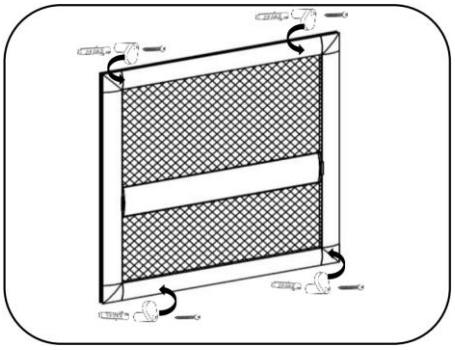

Use a utility knife to trim the excess mesh along the cutting groove provided in the profile.

4

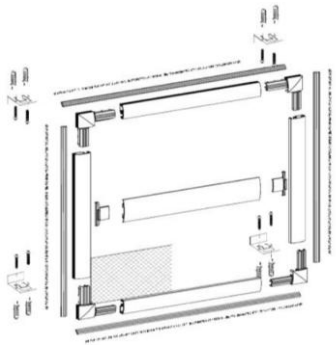

Install the screen using the chosen method. REVEAL INSTALLATION: Screw 2 clips to the top of the window opening and two to the bottom. Clip the screen into place.

5

FACE-FIXED INSTALLATION: Screw two turn buttons to the wall above the opening and two below it. Position the screen and turn the buttons to secure it.
